

Das Kaffeehaus Rösterei

The Das Kaffeehaus initiative has transformed part of the former Woollen Mill site by adapting the former Boiler Room to house the coffee rösterei, with staff offices, storage and merchandise area cleverly integrated into the former industrial space. This project shows the benefits of highly engaged owners with an innovative designer prepared to commit to retaining the integrity of the heritage space, as demonstrated in the reuse of the chimney flue and stack as an integral part of the coffee roasting process. This clever and innovative approach to adaptation will serve as a model for ongoing redevelopment of the Mill site and other redundant industrial sites across the Shire.
